

WINTER WARMTH WITH UNDERFLOOR HEATING

In the UK we live in a climate that can require heating in the home at almost any time...it is not unusual to find that some summer nights produce temperatures in single figures. As a result, trying to keep warm can be counted as one of our national pastimes! Underfloor heating, a method that will provide comfortable warmth, and do away with unsightly radiators or vents, is becoming more and more popular with housebuilders and home owners who are re-furbishing.

Photo Shows: A sitting room kept comfortably warm with Cosyfloor™ Underfloor heating

Cosyfloor™, Ecofloor and Ecomats from R & D Marketing, who supply the well known **demista™** heated mirror pads, are three systems that operate silently and efficiently, and can be used with all types of flooring, wood, laminate, stone, marble or tile.

The three systems can be used all around the house, with Cosyfloor™ and Ecofloor both earth screened so they can be safely used in areas such as bathrooms, wet rooms, laundry rooms and kitchens where water spillage is expected. Ecomat is ideal for laminate and wood floor surfaces in hallways, living rooms and bedrooms.

Both on/off and programmable thermostats with floor sensors and suitable insulation are also available.

Prices start at £29 per square metre.
