

PREPARING FOR NEXT WINTER? CHOOSE UNDERFLOOR HEATING

Don't get caught out the coming winter as everyone did last time. Late summer and early Autumn are the best times to prepare for the colder months, the time to put in that double glazing, the time to check the boiler, and the time to consider your heating options should you be re-furbishing.

The range of underfloor heating products, Cosyfloor™, Ecofloor and Ecomat are designed for specific areas of the home. Both Cosyfloor™ and Ecofloor can be used in every room in the house, including areas where the floor may get wet, bathrooms, shower rooms, kitchens and conservatories. Ecomat can be used in hallways, bedrooms and living areas.

Underfloor heating means no unsightly radiators, adding valuable space to smaller rooms, no hot surfaces for toddlers to touch especially in the nursery or playroom. The added space, especially wall space, enhances the aesthetic appearance of your reception and living areas.

Whether under timber floors, tiles, slate, marble, vinyl or carpet, underfloor heating is safe, reliable, and offers gentle, comfort heating levels whenever and wherever it is needed. Temperature can be easily controlled via room thermostats to produce the most cost effective and efficient heating. The system is easy to install and maintenance free.
