

SPACE-SAVING KITCHEN COMFORT

The saying goes "if you don't like the heat, stay out of the kitchen". However if you prefer your kitchen to be warm and inviting, then the answer is to install **Cosyfloor™** comfort underfloor heating. The gentle warmth is ideal and it can be controlled by an electronic floor sensing thermostat. As an alternative to the **Cosyfloor™** cable mats, there is the **Ecofloor™** underfloor cable kit, particularly useful in the kitchen where the underfloor heating needs to skirt round the kitchen units and appliances. Efficient underfloor heating is unobtrusive, unlike radiators that take up valuable wall space. Kitchens, where space is at a premium, often have very little free wall area to accommodate a radiator.
