

KEEP COSY ALL YEAR ROUND WITH COSYFLOOR

This year the United Kingdom has moved seamlessly from Winter, to Spring and now in to Summer, and it has been difficult to differentiate between these three seasons. On this basis, we might slip in to Autumn in a similar manner. Many people have found that they are turning on their central heating during months where previously they would not consider doing so. Or using energy-guzzling fan heaters to make a room more comfortable on these unseasonably cold evenings.

This is where underfloor comfort heating really comes in to its own. Underfloor heating, thermostatically controlled to provide just the right amount of heat, can take the edge off the cold without overheating the home. No hot radiators or air blasting in your face, just enough warmth to give that little bit of extra comfort if needed.

Choose a system to suit specific areas of the home. Cosyfloor™ and Ecofloor can be used in every room in the house, including areas where the floor may get wet such as bathrooms, shower rooms and kitchens. Ecomat can only be used in “dry” areas, such as hallways, bedrooms and living areas.

With low energy underfloor heating you have no unsightly radiators, adding valuable space to smaller rooms, no hot surfaces to touch, especially in the nursery or playroom as well as aesthetically enhancing the area.

Underfloor heating can be used under most floor finishes including timber , laminate, tiles, slate, marble, or carpet. It is safe, reliable, easy to install and maintenance free. Price start at £20.00 per square metre.
